

WOLF SOFTWARE SYSTEMS · ENTERPRISE

One binary. *Your entire* infrastructure.

Docker, LXC, VMs, Kubernetes, networking, storage, backups, status pages and workflow automation — managed from a single dashboard. Installed in one command. Written in Rust.

PREPARED FOR

Enterprise IT & Platform Teams

THE STATE OF PLATFORM TOOLING

Modern infrastructure is *duct-taped* together.

Platform teams cobble together six to ten point tools just to keep the lights on. Every tool has its own auth, its own clustering model, its own database, and its own learning curve.

Tool sprawl

Proxmox + Portainer + Uptime Kuma + Ansible + Tailscale + a wiki of tribal scripts.

Operational drag

Container, VM and bare-metal workflows live in different UIs with different mental models.

Hidden cost

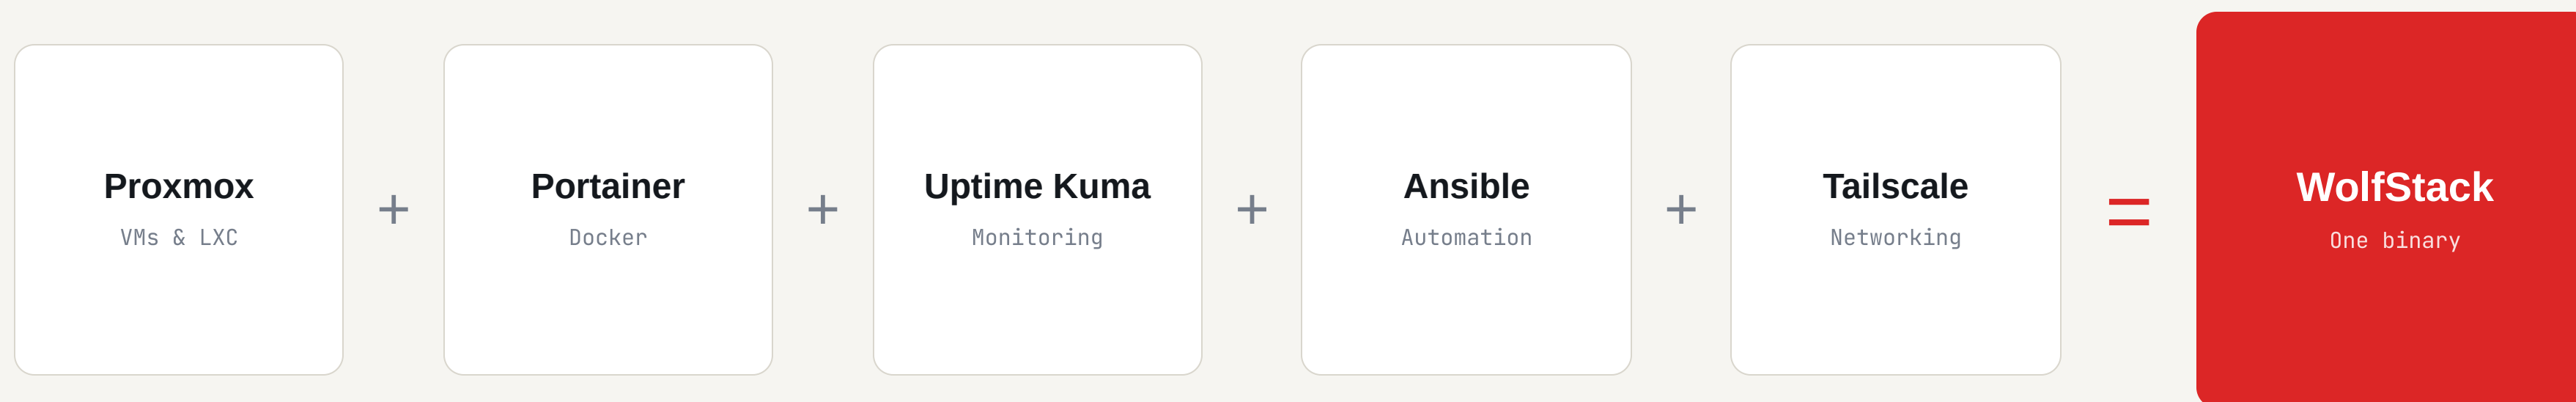

Per-tool licensing, integrators, training, and the headcount to glue it all together.

Fragile observability

Monitoring, alerting and status pages bolted on after the fact. Outages found by customers, not engineers.

STOP RUNNING SIX CONTROL PLANES

One platform replaces the patchwork.

Same clustering. Same UI. Same auth. Same backup target. No glue code, no integrator fees, no per-tool licenses.

INTRODUCING WOLFSTACK

A **single Rust binary** that runs your fleet.

No database. No container runtime requirement. No dependency hell. Installs on Ubuntu, Debian, Fedora, RHEL, openSUSE, Arch, Proxmox VE and Raspberry Pi — and federates them into one cluster.

```
# on every server you want to manage
$ curl -sSL https://wolfstack.org/setup.sh | sudo bash
# open the dashboard, paste the cluster token, done.
```

SINGLE PANE OF GLASS

Every node, every workload, one dashboard.

Real-time cluster map, node health, container and VM lifecycle, storage, networking, monitoring, and AI ops — all in one Rust binary running on every server.

ONE-CLICK APPS

1

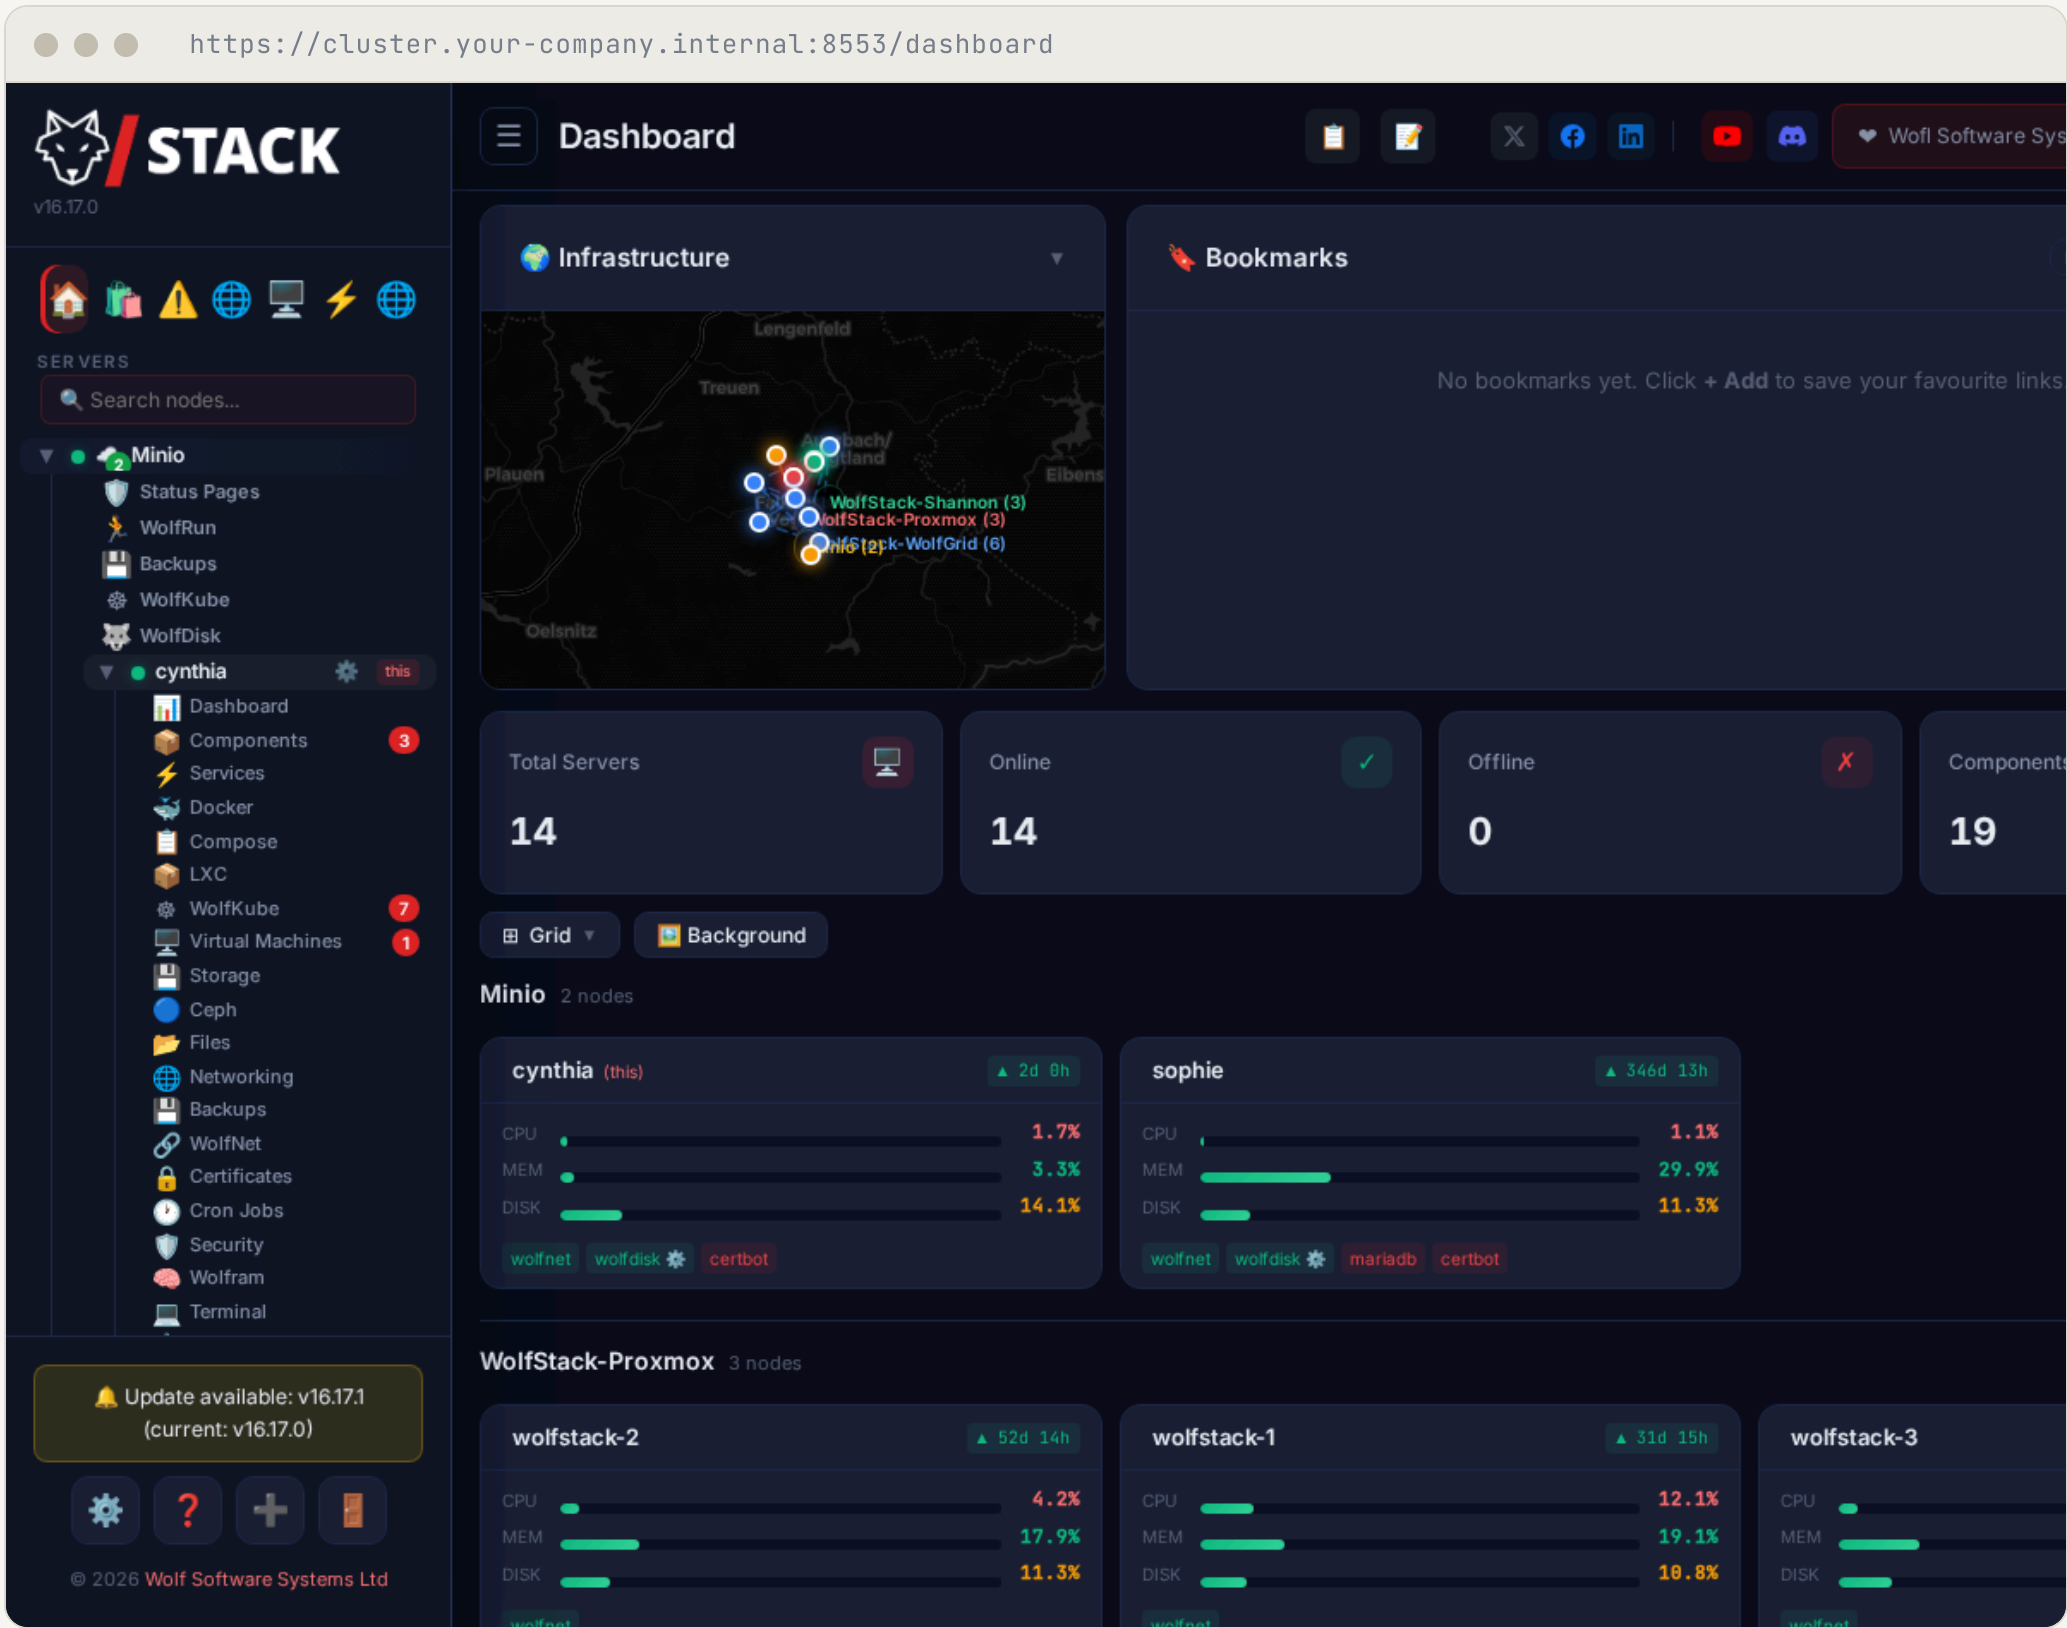

BINARY

8

LINUX DISTROS

0

DATABASES

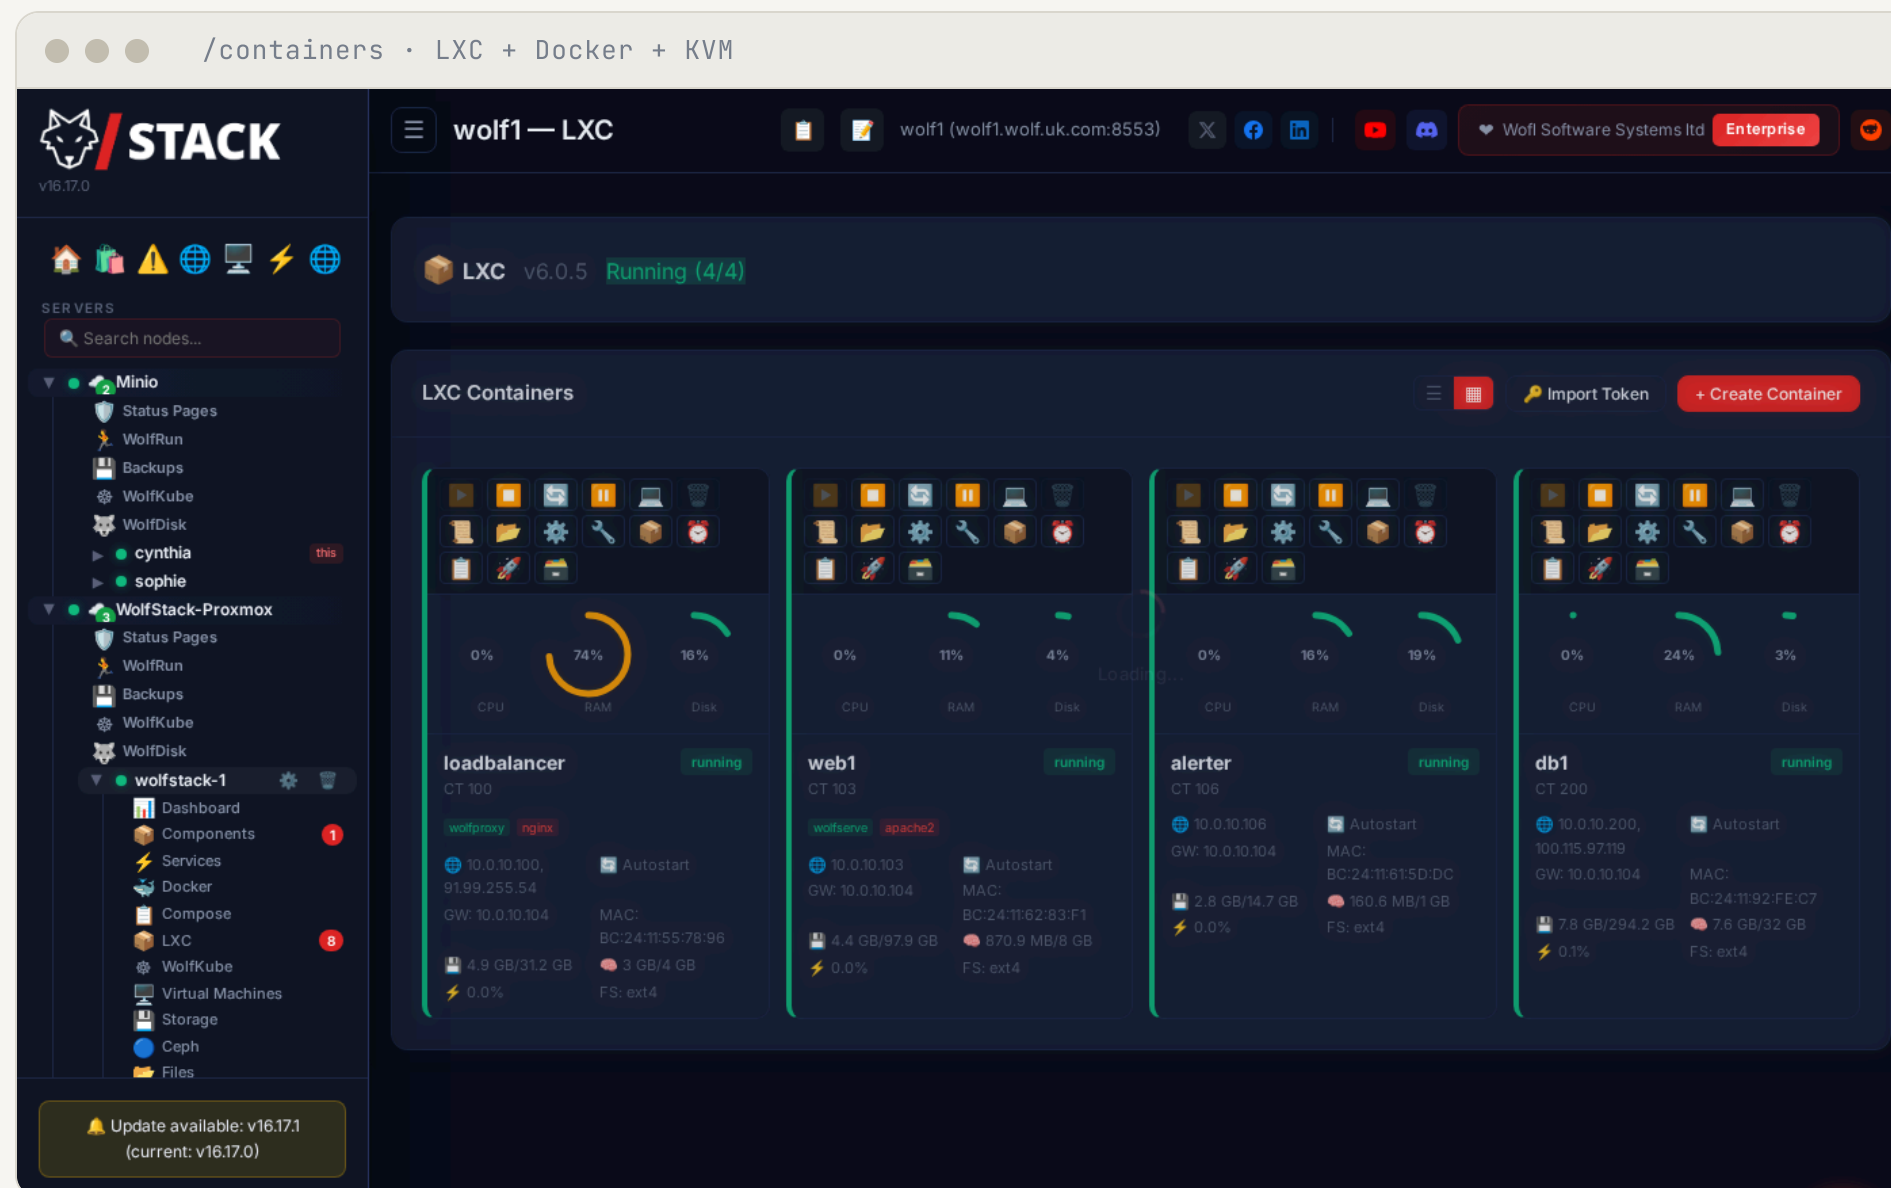

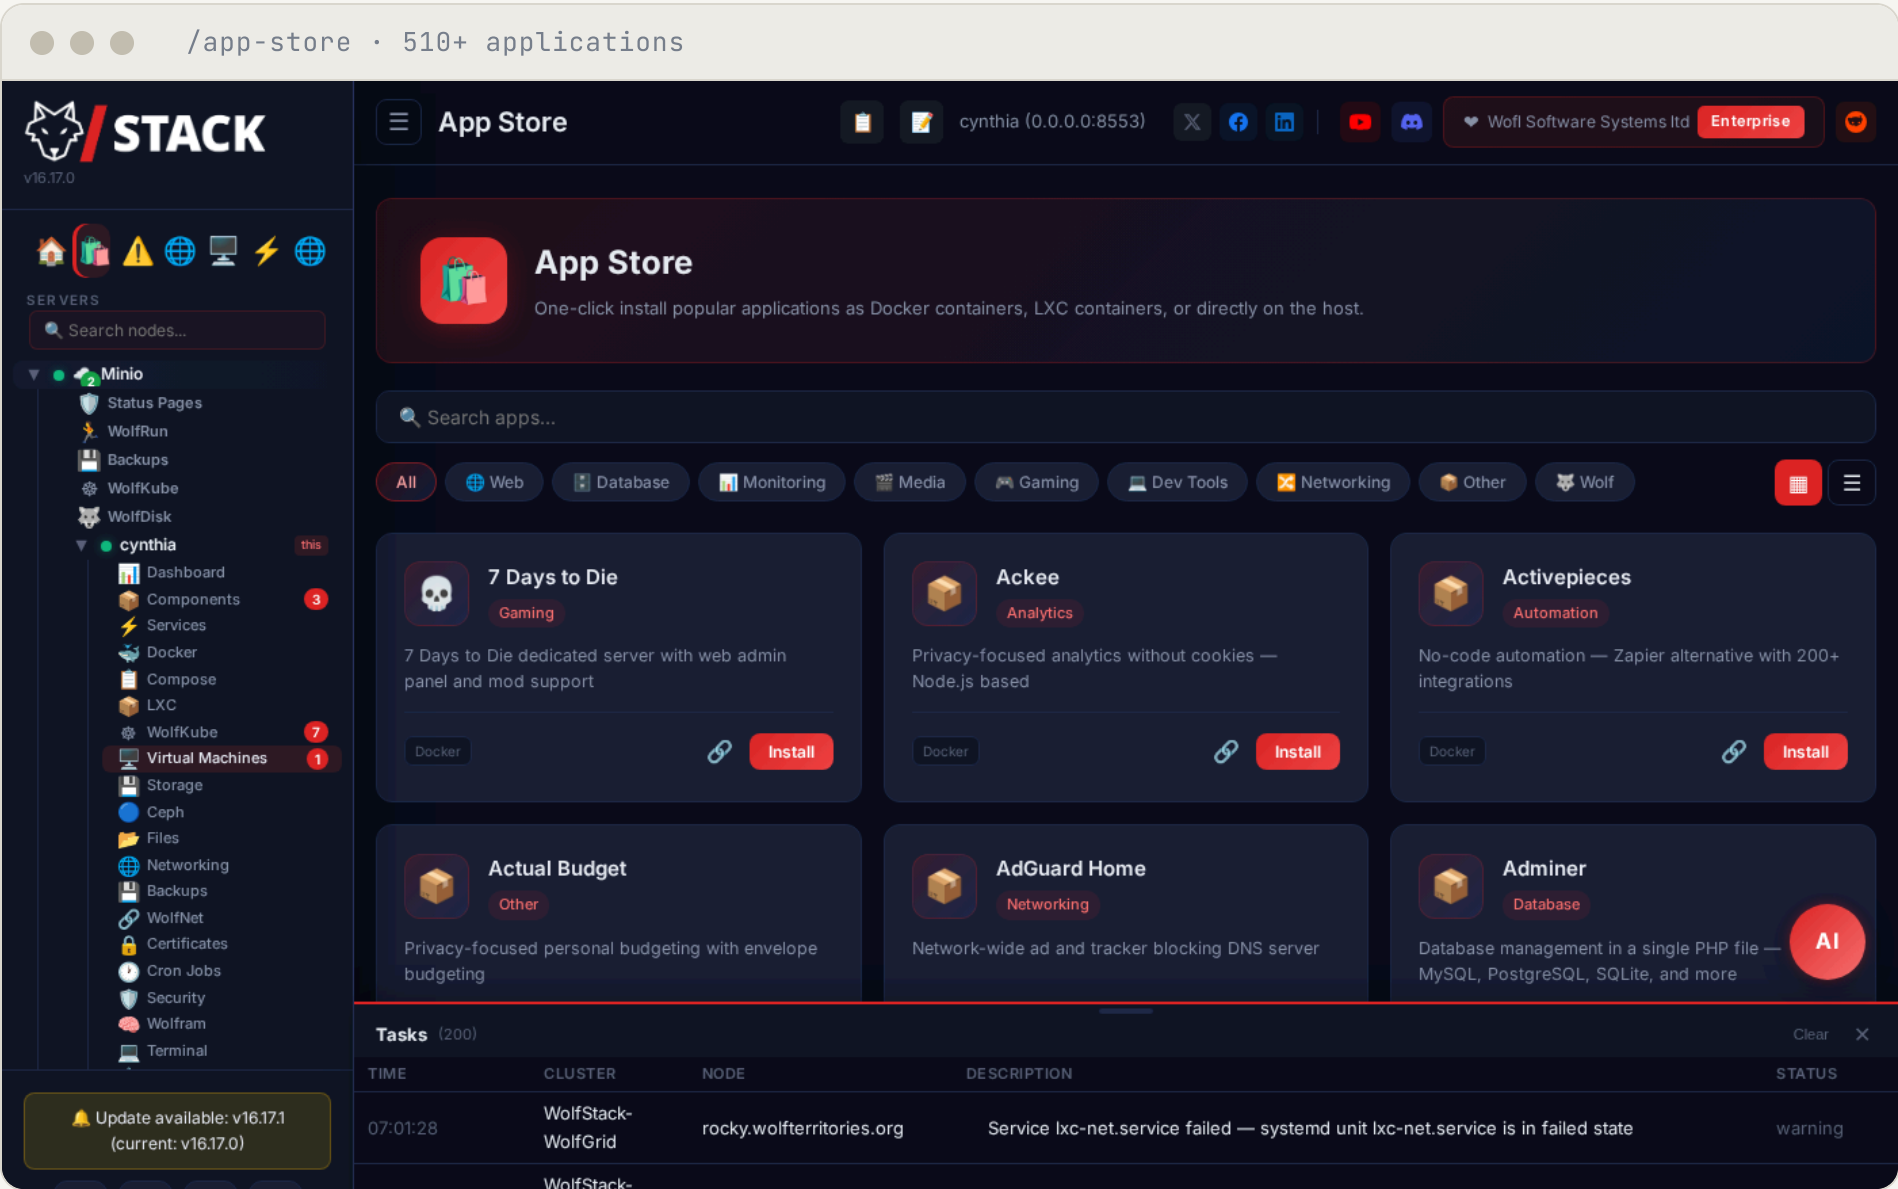

DOCKER • LXC • VMS • KUBERNETES

Every workload, one interface.

Most tools only do Docker. WolfStack manages Docker containers, LXC system containers, KVM/QEMU virtual machines, and Kubernetes clusters with the same UI, clustering and orchestration.

- Create, clone, migrate, and snapshot across nodes
- Auto-detects and adopts existing Proxmox & libvirt hosts
- WolfRun orchestration with automatic standby failover
- WolfKube for k3s, MicroK8s and kubeadm provisioning

510+ ONE-CLICK APPLICATIONS

The largest self-hosted app catalogue, pre-wired.

Every app ships with the right ports, volumes and environment variables. Deploy as Docker, LXC or bare metal — with sidecar databases provisioned automatically.

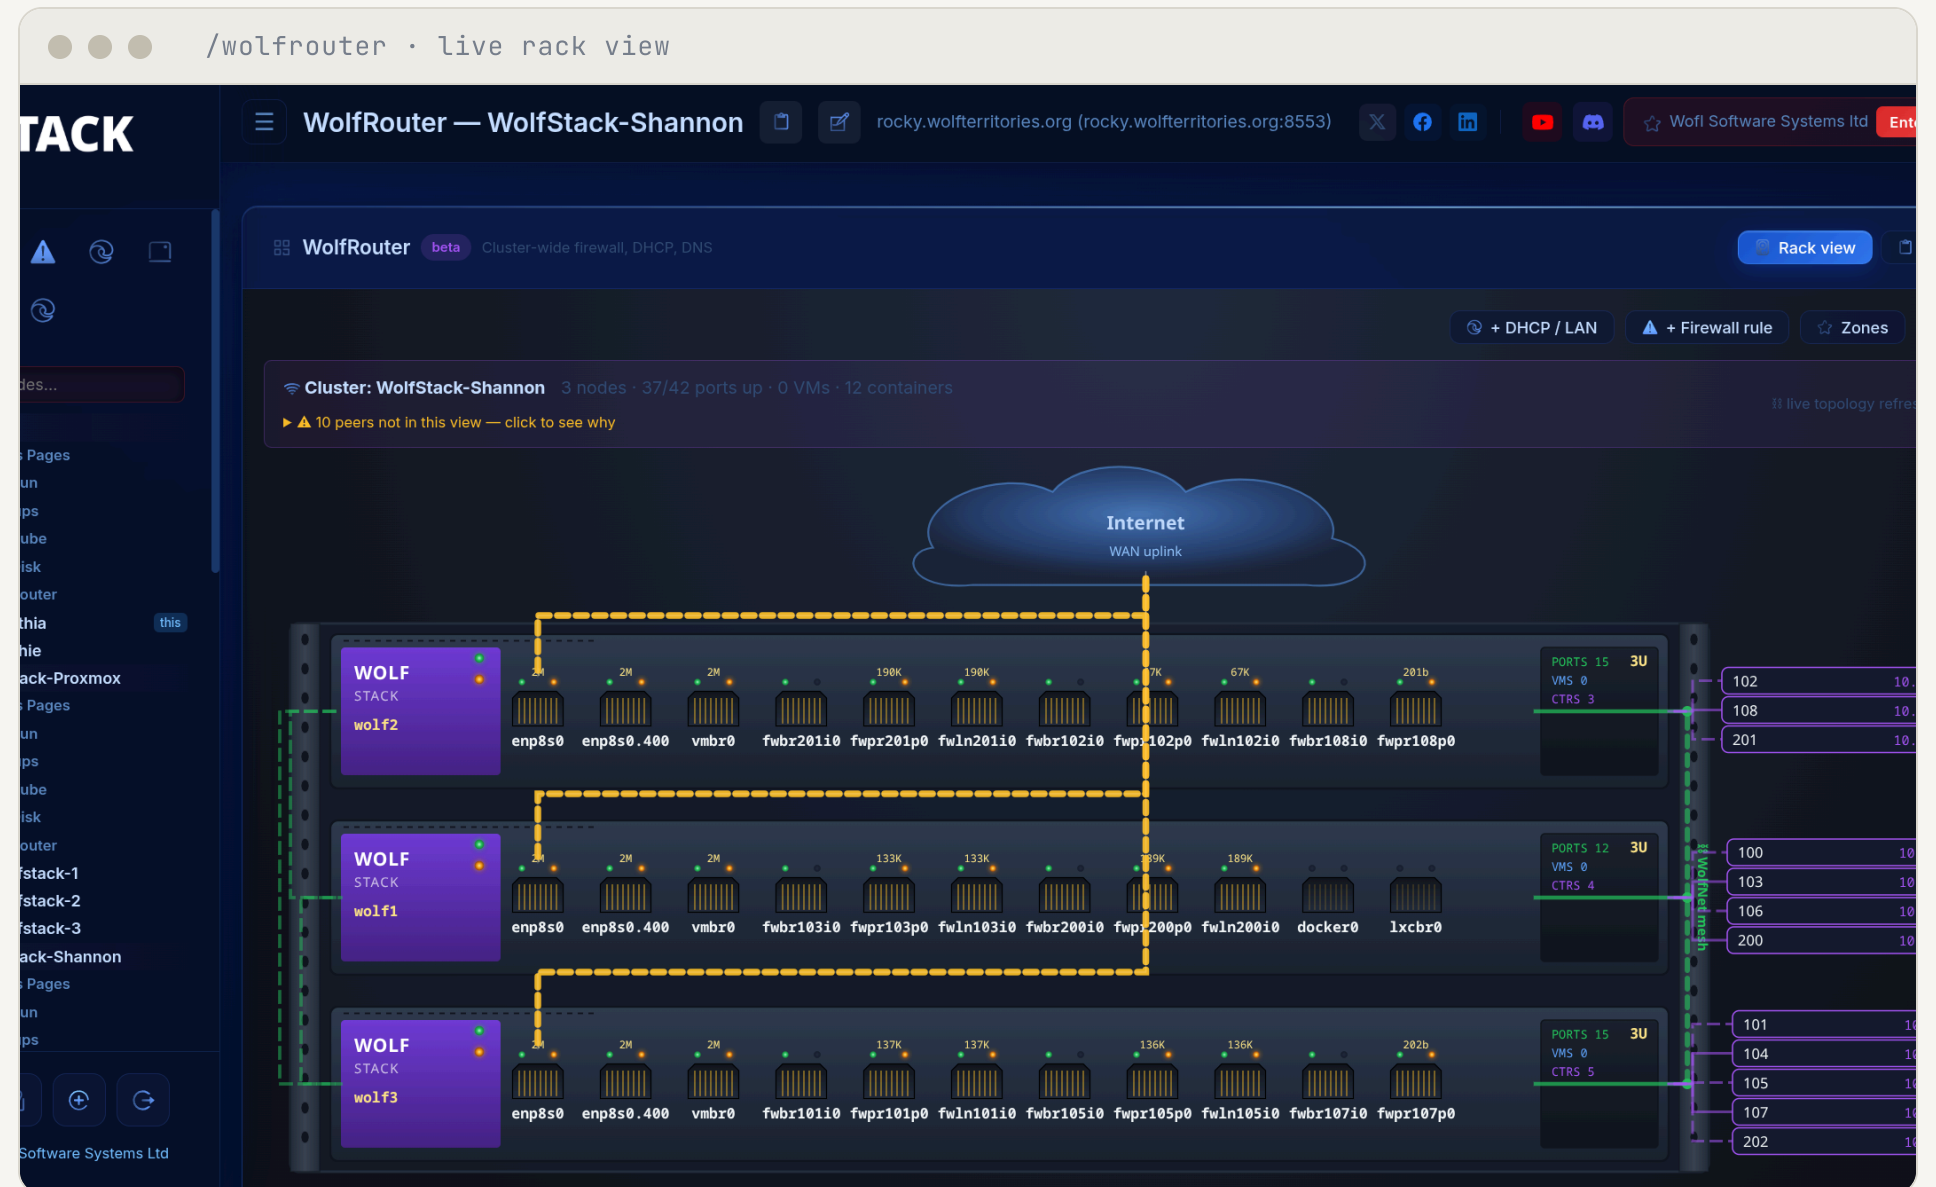

- Dev: GitLab, Gitea, Jenkins, SonarQube, Docker Registry
- AI/ML: Ollama, LocalAI, Stable Diffusion, ComfyUI, Jupyter
- Internal tools: Vaultwarden, Bookstack, Outline, Mattermost
- Plus the full Servarr, Home Assistant and observability stacks

WOLFNET • WOLFROUTER • CLUSTERING

Federate every site over an encrypted mesh.

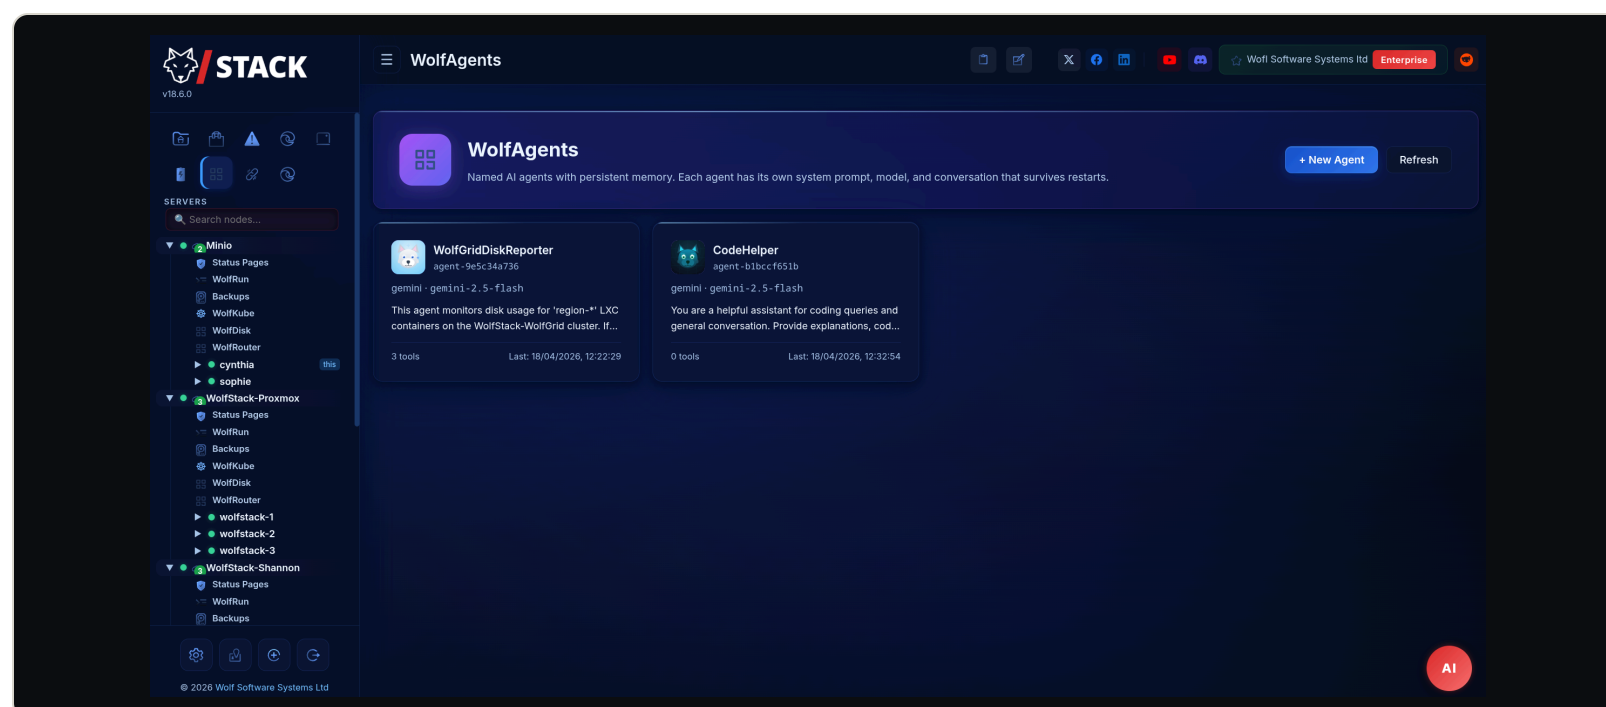

One cluster across data centres, clouds, branch offices and home labs. WolfNet creates a peer-to-peer encrypted mesh with built-in VPN. WolfRouter manages the perimeter — firewall, DHCP, DNS, PPPoE — with a live rack view.

- Add a node by pasting one cluster token
- WireGuard bridge for existing VPNs
- Container migration between nodes with zero glue
- Backups to S3, NFS, SMB, PBS, WolfDisk or remote nodes

WOLFACTENTS • WOLFFLOW • AI AGENT

AI that actually runs your cluster — on your terms.

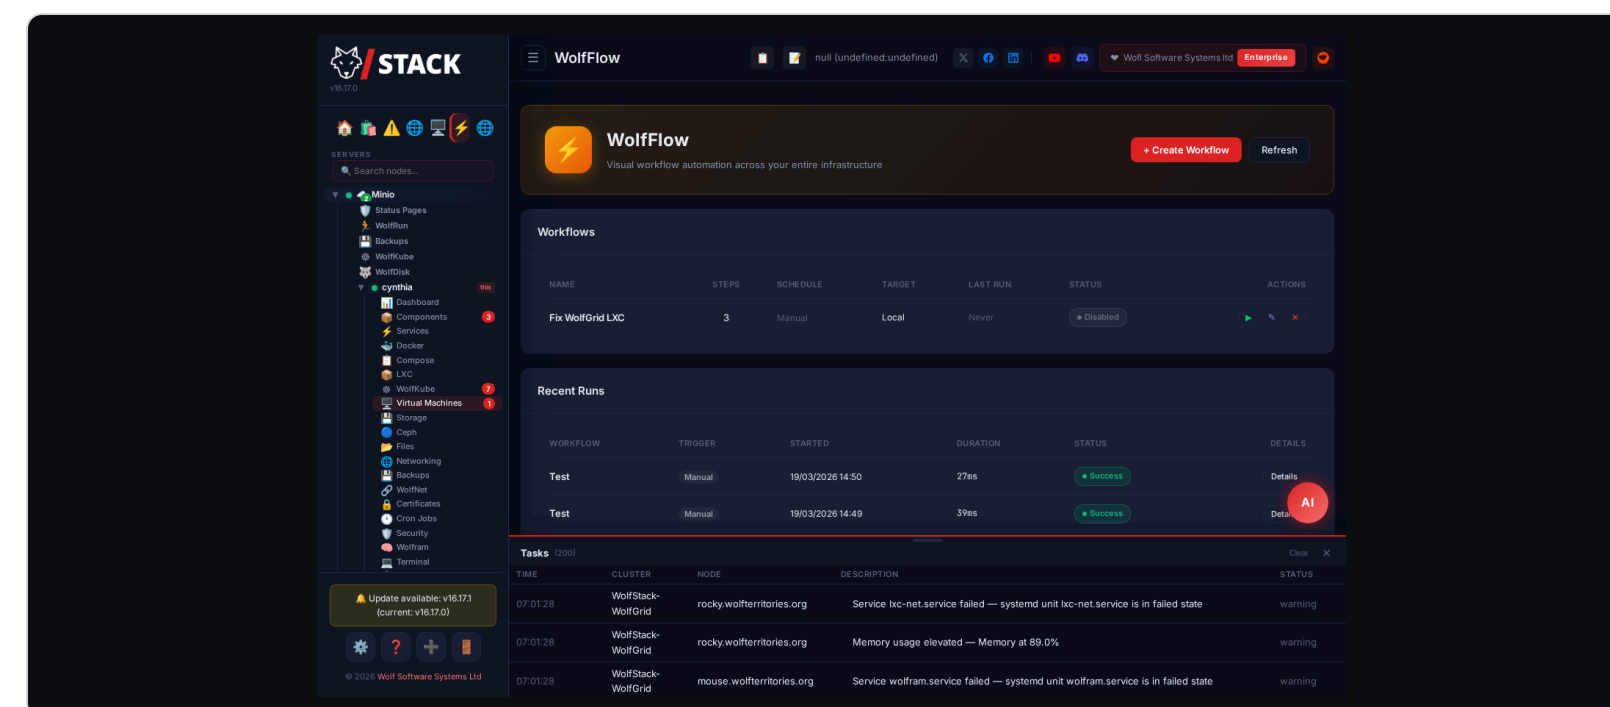

Named agents with persistent memory

Each agent has its own system prompt, tool allowlist, and audit log. Reach them from the dashboard, Discord, Telegram or WhatsApp. They email, schedule, and act on the cluster within the scope you grant.

Operator approval queue

20+ tools

Audit log

WolfFlow visual automation

Drag-and-drop runbooks with cron scheduling. 16 action types including HTTP, Docker image updates, NetBird, TrueNAS and Unifi connectors, conditional branching and notifications.

SIDE BY SIDE

One platform, instead of six.

CAPABILITY	WOLFSTACK	PROXMOX	KUBERNETES	PORTAINER	CASAOS	COCKPIT
Docker · LXC · VMs in one UI	All three	VM & LXC	No	Docker	Docker	Basic
Kubernetes provisioning	WolfKube	No	Native	Paid	No	No
Encrypted mesh VPN built-in	WolfNet	No	CNI plugins	No	No	No
Status pages & alerting	Built-in	No	Add-ons	No	No	No
Workflow automation	WolfFlow	No	No	No	No	No
AI agents on the cluster	Unlimited	No	No	No	No	No
Two-factor authentication	TOTP	Paid only	No	No	No	No
App store	510+ apps	No	Helm	Yes	Yes	No
Single binary install	Yes	ISO install	Very complex	Container	1 command	1 command

A COMPLETE ECOSYSTEM

Built around the platform — not bolted on.

FLAGSHIP

WolfStack

The management platform. Dashboard, containers, VMs, monitoring, App Store, status pages, AI agent.

BUILT-IN

WolfRun

Container orchestration with standby failover. Schedule and scale across the cluster.

BUILT-IN

WolfKube

k3s, MicroK8s and kubeadm provisioning. PVC storage, pod terminal, logs.

BUILT-IN

WolfFlow

Visual workflow automation. Drag-and-drop runbooks, cron, AI invoke.

BUILT-IN • NEW

WolfAgents

Named AI agents with persistent memory, scoped tools, and audit logs.

NETWORKING

WolfNet

Encrypted mesh networking with built-in VPN across any network.

STORAGE

WolfDisk

Distributed filesystem with content-addressed deduplication.

EDGE

WolfProxy

NGINX-compatible reverse proxy with built-in firewall.

WEB

WolfServe

Apache-compatible web server with PHP. Reads existing vhost configs.

ENTERPRISE

WolfHost

Complete web hosting platform. Customers, billing, domains, email, SSL, white-label portal.

TRANSPARENT & HONEST

Every feature is free. Enterprise is for businesses.

COMMUNITY

Free

· forever

Every feature. Every server. MIT licensed.

- ✓ Unlimited nodes & containers
- ✓ Full App Store, WolfFlow, WolfAgents
- ✓ Community Discord support

SPONSOR

£3

/mo

Fund the project. Get closer to the team.

- ✓ Private Discord channel
- ✓ Priority support & early access
- ✓ Roadmap input

RECOMMENDED

ENTERPRISE

£79

/server / mo

For teams that need SLAs and SSO.

- ✓ SSO, API keys & plugin system
- ✓ WolfHost & WolfCustom included
- ✓ SLA-backed dedicated support
- ✓ Procurement & legal-friendly contract

PILOT PROPOSAL

Run a 30-day *Enterprise pilot* on three nodes.

We install WolfStack Enterprise on three of your servers, federate them into a cluster, and migrate one production workload alongside your platform team. SSO, audit, and SLA enabled from day one.

Wolf Software Systems Ltd

Authors of WolfStack & WolfNote

PILOT

3 nodes • 30 days • no charge

INCLUDES

Install, migration, training session

ENTERPRISE

£79 / server / month thereafter
